LIST OF FIGURES

INTRODUCTION

It is proposed to redevelop the site located on the north and south sides of Hillcrest Drive, just west of South 37th Avenue, in Hollywood, Florida. It is proposed to redevelop the existing golf course with a mix of condominiums, single-family homes and county park uses. Figure 1 illustrates the location of the proposed development.

Kimley-Horn and Associates, Inc. has prepared this traffic impact statement for submittal to the City of Hollywood. The purpose of the study is to assess the project's impact on the surrounding roadway network and determine if adequate capacity is available to support future traffic volumes. This report summarizes the data collection, project trip generation, project trip distribution, link analysis and intersection analysis.

PROJECT TRAFFIC

Project traffic used in this analysis is defined as the vehicle trips expected to be generated by the project, and the distribution and assignment of that traffic over the study roadway network.

Existing and Proposed Land Uses

The project site currently contains an 18-hole golf course. The site is proposed to be redeveloped with the following uses:

- 340 Condo/Townhouse Units
- 305 Single-Family Units
- 56.89-Acre County Park

Trip Generation

The trip generation potential for amendment site was calculated using equations published by the Institute of Transportation Engineers (ITE) in *Trip Generation, Ninth Edition*. For the purposes of this analysis. Table 1 summarizes the trip generation potential for the daily, AM peak hour and PM peak hour scenarios. As shown in Table 1, the proposed redevelopment results in a net increase of 4,282 net new external daily trips, 324 net new external AM peak hour trips and 403 net new external PM peak hour trips.

Daily Trips			
Golf Course	[ITE 430]	=	35.74 trips / hole
Condos/Townhouses	[ITE 230]	=	Ln(T) = 0.87 Ln(X) + 2.46
Single Family Detached	[ITE 210]	=	Ln(T) = 0.92 Ln(X) + 2.72
County Park	[ITE 412]	=	2.28 trips / acre
AM Peak Hour			
Golf Course	[ITE 430]	=	2.06 trips / hole (79% in, 21% out)
Condos/Townhouses	[ITE 230]	=	Ln(T) = 0.80 Ln(X) + 0.26 (17% in, 83% out)
Single Family Detached	[ITE 210]	=	T = 0.70(X) + 9.74 (25% in, 75% out)
County Park	[ITE 412]	=	0.02 trips / acre (61% in, 39% out)
PM Peak Hour			
Golf Course	[ITE 430]	=	2.92 trips / hole (51% in, 49% out)
Condos/Townhouses	[ITE 230]	=	Ln(T) = 0.82 Ln(X) + 0.32 (67% in, 33% out)
Single Family Detached	[ITE 210]	=	Ln(T) = 0.90 Ln(X) + 0.51 (63% in, 37% out)
County Park	[ITE 412]	=	0.09 trips / acre (61% in, 39% out)

Trip Distribution

Project traffic was distributed to the external roadway network based on a review of the surrounding travel time characteristics and the location of various complementary land uses. The general distribution of the traffic traveling to and from the site was identified as:

- North – 37%
- East – 16%
- South –37%
- West – 10%

Traffic Assignment

The site traffic was assigned to the surrounding roadway network according to the trip distribution described above. Figure 2 illustrates the project traffic assignment percentages.

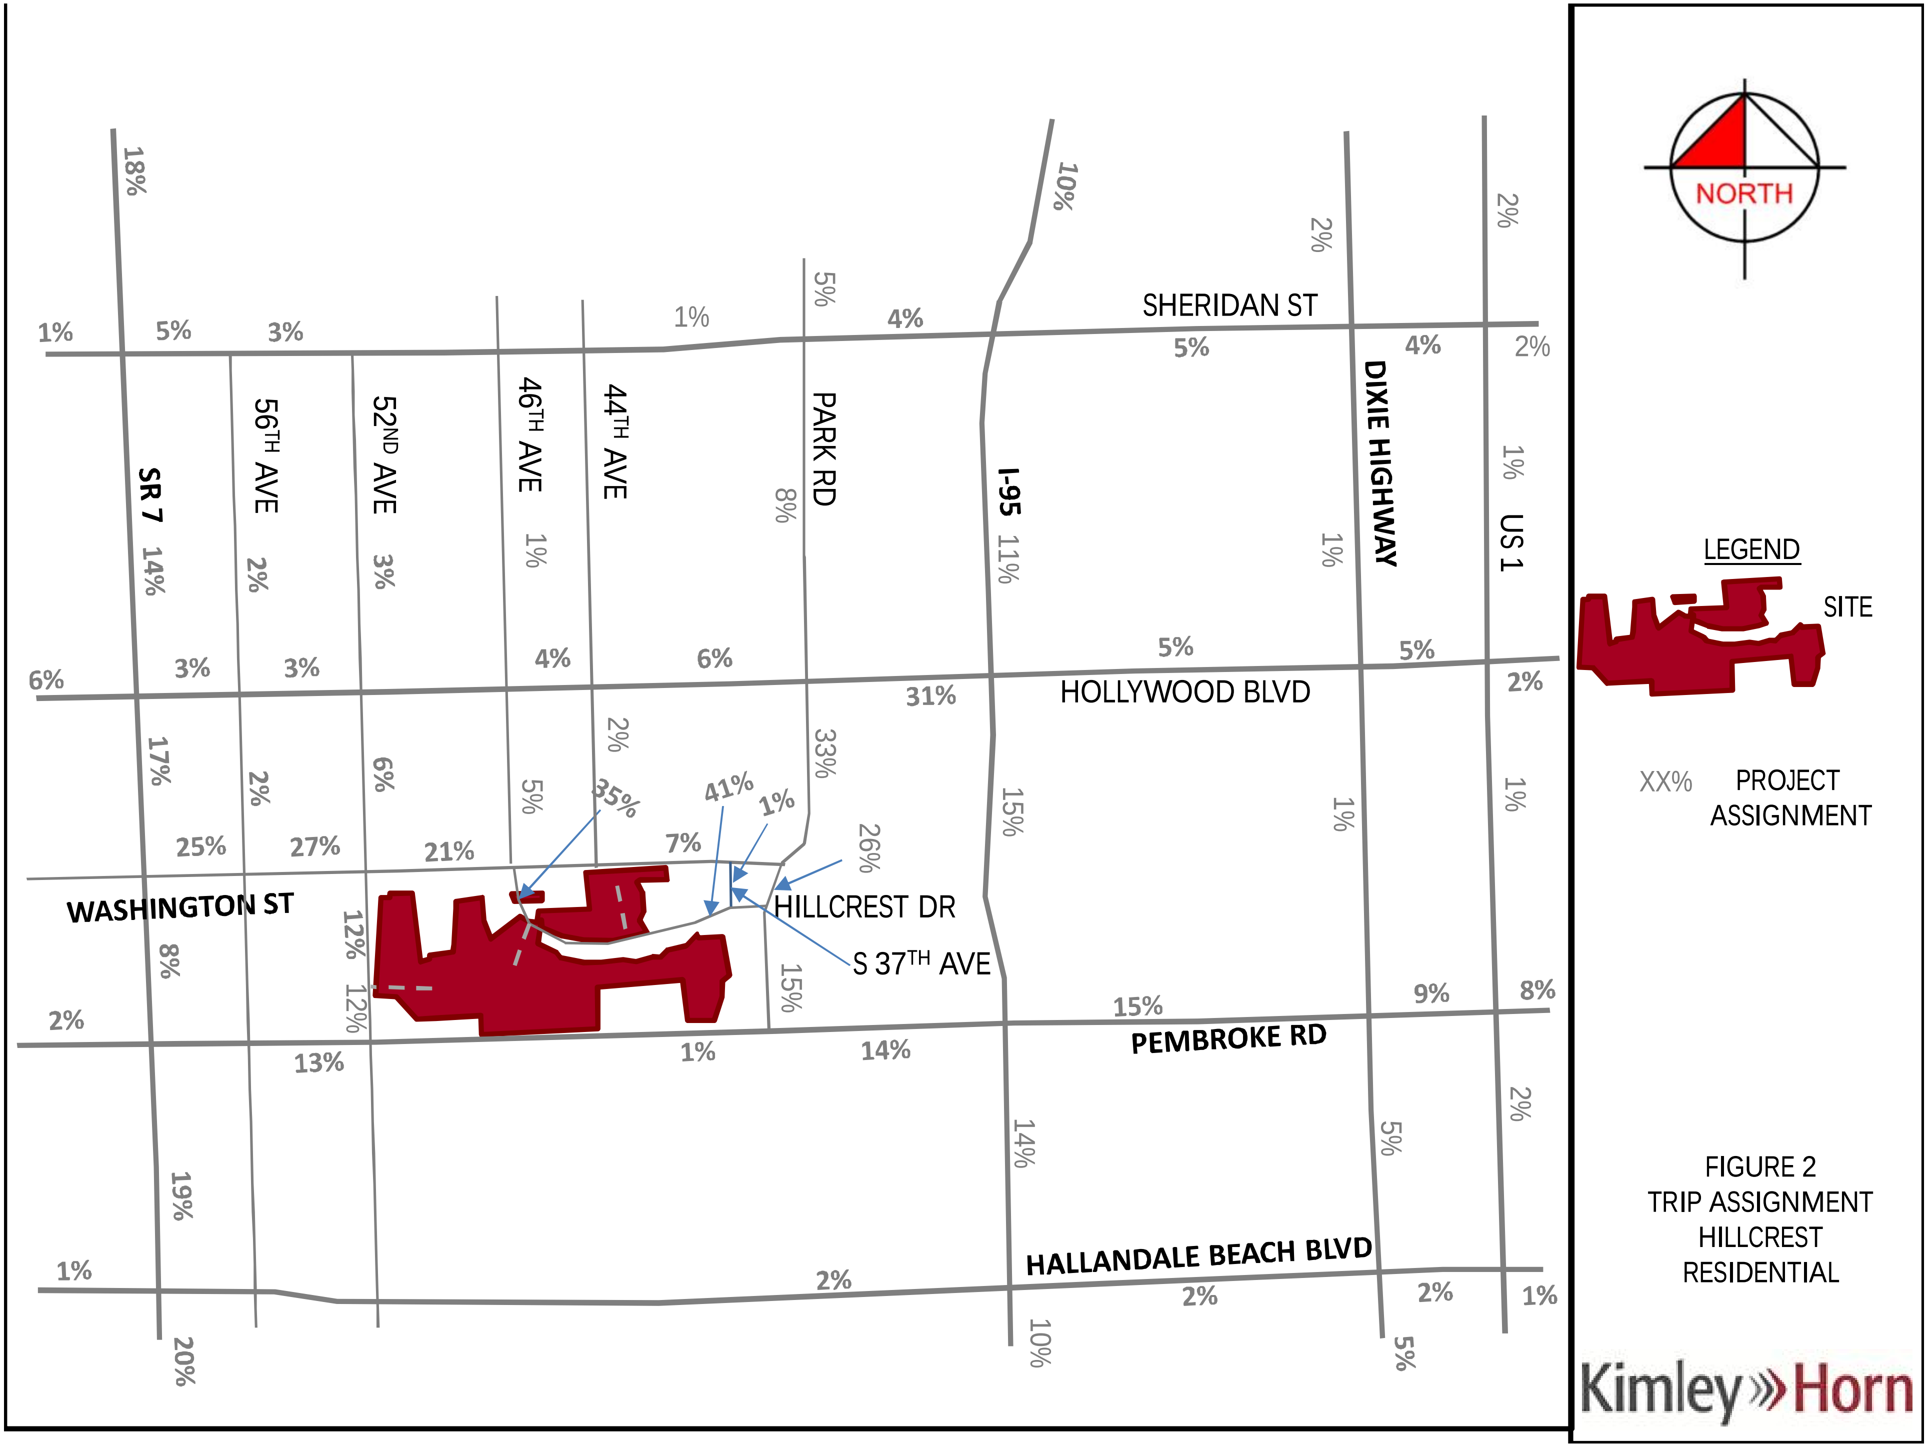

FIGURE 2
TRIP ASSIGNMENT
HILLCREST
RESIDENTIAL

Kimley»Horn

EXISTING TRAFFIC

Existing traffic conditions on the surrounding roadway links were determined based upon 2013 peak season traffic volumes provided by the Broward County Metropolitan Planning Organization (MPO).

AM peak hour (7:00 AM to 9:00 AM) and PM peak hour (4:00 PM to 6:00 PM) turning movement counts were conducted on Tuesday, June 16, 2015 at the following intersections:

- Washington Street & Hillcrest Drive
- Hillcrest Drive & Park Road
- Pembroke Road & Park Road
- Hillcrest Drive & Clubhouse Entrance
- Hillcrest Drive & East Clubhouse Entrance

These counts were used as the basis for the analysis of the intersections and surrounding links. The intersection turning movement count data is included in Appendix B.

FUTURE TRAFFIC

Future traffic conditions are defined as the expected traffic conditions in the year 2020 after project trips have been applied to the roadway network. Total traffic volumes considered in the analysis for this project are the sum of the 2020 background traffic volumes and the expected project traffic volumes. Background traffic volumes are the sum of the existing traffic, committed development traffic and an additional amount of traffic to account for potential growth in the study area. Because the existing counts were conducted when school was not in session, the committed traffic for the Championship Academy of Distinction Charter School was included in the background traffic calculations. To determine this traffic, trip generation calculations were conducted for an 850-student charter school. These trips were then assigned to the surrounding roadway network using the same general distribution as the project traffic. Because the historical growth on the surrounding links was found to be less than 1.0%, a nominal 1.0% growth rate was used to calculate background growth. This growth rate was applied to the existing traffic before project traffic was added to the links.

The trip generation calculations for the Championship Academy of Distinction Charter School are included in Appendix B.

LINK ANALYSIS

Per the methodology agreed upon with the City, this analysis provides an assessment of roadway links in the immediate vicinity of the project. The analysis is evaluated for year 2020 traffic conditions. The project traffic was assigned to Hillcrest Drive, Park Road and Washington Street to determine the project impacts in the immediate vicinity of the project. Links on which project traffic was greater than 5% of the LOS D service volume were considered to be significantly impacted. Table 2 summarizes the significance calculations for these links. Table 3 summarizes the capacity calculations for the significantly impacted links. As shown these tables, all of the significantly impacted links are projected to operate at LOS D or better under future total traffic conditions.

INTERSECTION ANALYSIS

The operating conditions for three conditions (existing, background and future total) were analyzed using Trafficware's Synchro 9.0 Software, which applies methodologies outlined in the *Highway Capacity Manual, 2000 Edition*. For this analysis, the following intersections were analyzed:

- Washington Street & Hillcrest Drive
- Hillcrest Drive & Park Road
- Pembroke Road & Park Road

Tables 4, 5, 6 summarize the level of service under existing, future background and future total conditions, respectively. As summarized in these tables, all intersections will operate at level of service (LOS) D or better under all conditions with existing laneage.

The future total operating conditions for the site's proposed driveways were analyzed using *HCS+* Software. For this analysis, the following intersections were analyzed:

- Hillcrest Drive & School Driveway
- Hillcrest Drive & Proposed Roundabout
- Hillcrest Drive & East Proposed Driveway

Table 7 summarizes the level of service under future total conditions at the stop-controlled driveways and the volume to capacity (v/c) ratios at the roundabout. As shown in Table 7, all driveways will operate at LOS D or better with future total volumes well below the capacity. Figure 3 illustrates the future total volumes at the site's driveways.

The proposed roundabout on Hillcrest Drive was analyzed as a single-lane roundabout. Due to the number of lanes on some of the approaches, a multi-lane roundabout could create driver confusion. As such, capacity analysis was not performed for a multi-lane scenario.

The City has expressed concern regarding the proximity of the proposed roundabout to the existing school driveway. Therefore, the developer is proposing cross-access between the main southern driveway and the school. This will substantially increase available queuing distance for school drop-off/pick-up operations and potentially eliminate westbound left-turns from Hillcrest Boulevard into the school.

The turning movement counts are included in Appendix B. The volume development sheets, signal timing sheets, HCS and Synchro worksheets are included in Appendix C.

Other Roundabouts

The roundabout at the main driveway & Hillcrest Drive is the only proposed roundabout on the existing public street network. Roundabouts are included internal to the site and are provided for aesthetic and speed control reasons. Due to the low volumes of traffic on these internal roads, no analysis has been performed.

Analysis of School Driveway

Rather than performing new traffic counts, the traffic impacts from the full 850-student school (as proposed) were added to the intersection analysis. This provides a conservative analysis as it assumes that no school traffic was included in the previous counts, and assumes buildout of the proposed expansion. School traffic was distributed similarly as the remainder of the Hillcrest traffic and existing roadway distribution.

The school driveway was analyzed with HCS+ software. The future total level of service (LOS) and projected queues into the site are summarized in Table 7. As shown in Table 7, the future queues into the site are not expected to exceed the existing storage area based on the HCS analysis. However, the developer still providing cross-access to the school site to alleviate any potential future congestion on Hillcrest Drive

CONCLUSION

It is proposed to develop a mix of condominiums, single-family homes and county park uses on the north and south sides of Hillcrest Drive, just west of South 37th Avenue, in Hollywood, Florida. Trip generation calculations were prepared to evaluate the volume of trips anticipated to be generated during the weekday AM and PM peak periods by the proposed redevelopment. As shown in this evaluation, the proposed redevelopment results in a net increase of 4,282 net new external daily trips, 324 net new external AM peak hour trips and 403 net new external PM peak hour trips. As shown in the analysis, all study intersections and roadways links will operate at an acceptable level of service through buildout in 2020.

APPENDIX C: HCS AND SYNCHRO SUMMARY SHEETS

Laukaitis, Benjamin

From: Addie.Kraemer@kimley-horn.com
Sent: Thursday, June 25, 2015 11:43 AM
To: Laukaitis, Benjamin
Subject: Signal Timing Sheet Request

Good Morning,

I am currently working on a traffic study in Hollywood and am in need of the signal timing sheets for:

- Washington Street & Hillcrest Drive 3264 PARK + WASHINGTON - I THINK.
- Hillcrest Drive & Park Road 3266
- Pembroke Road & Park Road 3170

Thank you so much!

Addie Kraemer

Subject: RE: Signal Timing Sheet Request

Ben,
Thank you very much! Would it be possible to get the intersection of S 46th Ave and Washington St as well?

Thanks again,

Addie Kraemer

To: Laukaitis, Benjamin
Subject: Signal Timing Sheet Request

Good Morning,

I am currently working on a traffic study in Hollywood and am in need of the signal timing sheets for:

- Washington Street & Hillcrest Drive
- Hillcrest Drive & Park Road
- Pembroke Road & Park Road

Thank you so much!
